## A time display which works for you.

Whether you are a large corporation or small business, marketing to your clients or potential clients is essential for your survival. The chance to market and inform a captive client base is a chance that no one should miss. Clockmasters have developed just the tool to help you do that, with the time and information display. Information can be downloaded in picture or text format or in templates with option of setting the information to display continually or to a time / date display. The display format changes every one to three minutes. This keeps the attention of the client with out being intrusive

The format can be set up to suit your needs. Your logo can be set up as part of the display template to enhance your displayed company image. Information can be added or removed at any time. The time and information display can be operated as a single unit or networked from a head office.

## Public clocks that keep perfect time

Clockmasters have a range of outside clocks which use a 5 year lithium battery and GPS tracking to give perfect time and automatic daylight saving. The clock range from 500mm to 800mm in diameter. The range includes wall clocks to street clock of various styles. The GPS receiver movement can control up to three slave movements. With the lithium battery the clocks need no main power, allowing for a cost affective public clock. Suitable for malls, parks, streets and shopping centres.
