## ClockMasters Australia in Port Denarau, Fiji

ClockMasters Australia recently used their expertise in manufacturing to supply a tower clock to Fiji.

The clock was manufactured in the Australian workshops then disassembled, crated and shipped to Port Denarau for reassembly.

The clock was specifically designed to ensure easy reassembly on site with clear instructions.

In these circumstances ClockMasters Australia offers free technical support to aid in assembly, however in this situation the assemblers found the instructions clear and easy to follow without any need of assistance.

The diameter of the clock was 1.5 metres with two dials. The chapter ring was laser cut out of 10mm thick aluminum and painted black to match the hands, then weather proofed.

The stainless steel sharp movement is controlled by the ClockMasters Australia 50-230 Master Clock.

## Heritage clock rebuilt

The Australian Lutheran College is a landmark building of historical, architectural and environmental significance, dating back to 1854.

ClockMasters Australia were recently honoured to undertake the task of rebuilding the clock, which is heritage listed.

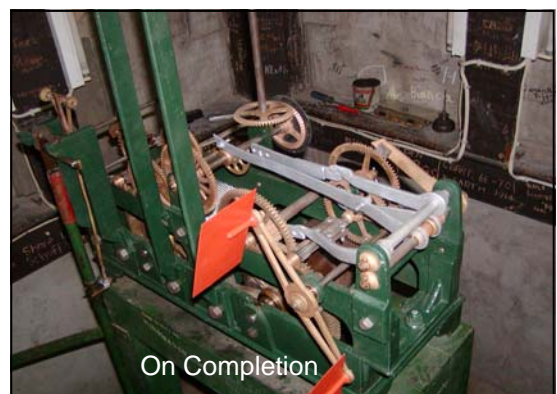

All the work was carried out using traditional materials and methods to keep it within the heritage listing requirements. The movement was removed from the tower, new and manufactured parts were installed and all worn brushes were replaced. The pictures below show the movement before and after the restoration.
