ClockMasters Australia upgrades the Perth Railway Station Clock System

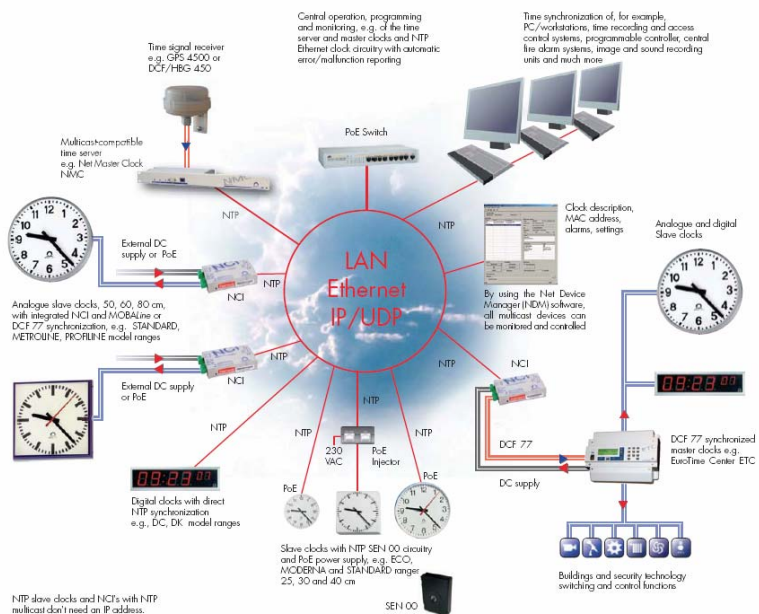

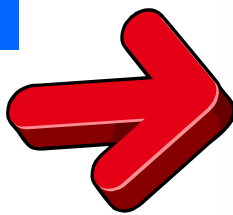

ClockMasters have been working with the Perth Transport Authority on the upgrade of the clock system at the Perth Railway station.

Stage one is completed with the installation of a new movement to drive the large clock on the outside wall of the station.

The clock is connected to a time server through the internet. This is done with an ETC12/NMC master clock system. See below for an example of this type of system. This system gives the user a large amount of flexibility allowing them to run analogue and digital display clocks off the same system. Information required to keep the clock synchronized to each other can be sent using an option of LAN, Data, or hard wiring. Stage two has started with the upgrade on the clocks on the platform.

An example of a precise, cost-effective time synchronization for Ethernet LAN clients.

The ClockMasters website is updated on an ongoing basis —check it out today at www.clockmasters.com.au

Supporting Education

The staff and management at ClockMasters are proud and privileged to be involved with the Industry Alliance Program at the University of South Australia. The program involved taking in students and having them work under guidance on a project. We at ClockMasters found we got as much out of this experience as the students.

At a breakfast in September we were awarded a bronze certificate of appreciation. If your business would like to be involved in this program or would like more information you can get in touch with the university on the web site at – www.cis.universitysa.edu.au./iap

Merry Christmas

All the staff at ClockMasters wish to take this opportunity to thank clients and readers for their support throughout the year and wish them a Merry Christmas and Prosperous New Year.

Our office will be closed from the 24 December 2008 to 12 January 2009

Watching the dollars

With the world forecast to be reclining into a recession the last thing any employer requires is to lose money through bad timekeeping. Do you have problems with staff stopping work 3 minutes before its time to punch their time card - standing around the time recorder talking until to clock out? Or staff coming into the lunch room early and leaving late? All the minutes add up at the end of the week to hours lost. ClockMasters offer a range of digital commercial clocks with large displays which make them easy to see in all environments. With these clocks all employees will be working off the same time and not their own time, saving you money and making you more competitive at the end of the day. To make it economical ClockMasters offer you the option of rental as well as purchasing these clocks outright.

Clockmasters Australia build clocks. From sports timing clocks, large tower clocks, right through to clocks used in operating theatres... we know our stuff. Using our extensive knowledge we have sourced components from all over the world to assemble the best priced commercial digital clock you will ever find. We have put in all the features you need, with an Australia wide 12 month guarantee so you can't go wrong! See www.clockmasters.com.au for more information and other products.

CMA-75-35 HMS

- Remote control
- Red time display in 75mm high lettering
- Viewing distance up to 30 metres
- 24 hour time display format
- Aluminium case
- 240 volt AC connection
- Auto time reset after power blackout
- Case size H: 140mm L: 515mm D: 60mm

CMA-140-70 HMS

- Remote control
- Red time display in 140mm high lettering
- Viewing distance up to 70 metres
- 24 hour time display format
- Aluminium case
- 240 volt AC connection
- Auto time reset after power blackout
- Case size H: 215mm L: 790mm D: 60mm
